

M7.11 Team Deliverable 2

1. **Name:** David Batista
2. **Github ID:** dbat1sta
3. **Group:** Crack Those Macros
4. **What I planned to do:**
 - Implement a meal sources table
 - Implement a meal recommendation page
 - Implement a user dashboard
5. **What did I not do:** implement a meal sources table
6. **Problems encountered:** I did not have any notable issues this sprint. The most difficult aspect was diving into the literature to learn more about React, as I have not used this framework prior to this assignment.
7. **Issues Fixed:** none
8. **Files worked on:**
 - UserDashboard.js
 - UserDashboard.css
 - GetMealSuggestion.js
 - Meal-Suggestion.css

9. What I accomplished:

This sprint my main focus was working on frontend files for the user's dashboard (where they can enter/update their physical stats) and for the meal suggestion page. I was able to create both pages with significant functionality. Next sprint, I plan to refine these pages, as well as edit the CSS files more to make the app as a whole prettier.
