Name: Nick Dubauskas

Github ID: ndubausk

Group Name: Crack-Those-Macros

What you planned to do:

- Adjust User Questionnaire to fit the algorithm
- Create daily macro table
- Link daily macro table with database

What you did not do:

- Link daily macro table with database

What problems you encountered:

- Not too many issues. There was a timing period for waiting on the database to be setup to hold the daily macros for the user.

Issues Completed:

- As a user, I would like to fill out a form, so that I can share my fitness and dietary goals
- As a user, I would like to see my daily macros.

Files you worked on:

- DailyMacros.js
- Server.py
- Questionnaire.js

What you accomplished:

Using React, I created a progress wheel using react-circular-progressbar. This is for the user to track their daily progress.

I updated the questionnaire to accommodate for how much weight lose and gain.
